

Didac Llorens

Software Engineering · ML/AI · Agentic Systems · Tooling · Barcelona

didaclorensbravo@hotmail.com | didacll.github.io/AgenticCareerBoost | github.com/DidacLL | linkedin.com/in/didaclorens

PROFILE

Software Engineering student at Universitat Oberta de Catalunya, specializing in Machine Learning and Artificial Intelligence. Expected graduation: February 2027. Current work combines agentic systems, LaTeX tooling, backend foundations, technical writing, and public project pages.¹

ROLE DIRECTION

- ML Engineering
- Data Engineering
- Agentic AI Tooling
- Backend Engineering
- Platform / Tooling
- Research Engineering

TECHNICAL MAP

Backend / systems
Java, Spring Boot, REST APIs, SQL, Linux, Git.

AI / data
Python, ML/AI coursework, model behavior, inference basics, data quality.

Tooling / documents
LaTeX, Markdown, GitHub Actions, technical reports, static sites.

Work style
Repository-first work, small contracts, buildable documents, clear project state.

BEFORE ENGINEERING
15 years in banking and insurance operations. Team leadership, case triage, regulated processes, customer-facing problem resolution, and stakeholder communication. Useful transfer: pressure, procedures, data quality, failure cases, and audit habits.

MAIN LINKS

[AgenticCareerBoost](#)
[P3CTeX](#)
[IronBank](#)

Current direction

I am moving from a long background in regulated operations into software engineering, with a focus on ML/AI, agentic workflow systems, backend foundations, and technical tooling. My public work is organized through repositories, reports, project pages, and buildable documents.

Selected work

AgenticCareerBoost [Agentic systems](#) · [static site](#) · [reports](#)
GitHub repository and public site used to organize current engineering work: role files, workflow files, project state, generated reports, and project pages.

[Repository](#) · [Public site](#)

P3CTeX

[LaTeX tooling](#) · [academic documents](#)
Custom LaTeX class and package ecosystem for academic document production. Covers document structure, reusable commands, screenshots, listings, styling, and local build scripts.

[Repository](#)

p3cTeX-UMLST

[Package extraction](#) · [diagrams](#) · [listings](#)
Standalone UML diagram and code-listing packages extracted from the larger P3CTeX system. Focused on separating reusable LaTeX tooling from a broader personal document class.

[GitHub profile](#)

IronBank

[Java](#) · [Spring Boot](#) · [backend](#)
Older Java/Spring Boot banking simulation from IronHack. Useful backend baseline and a bridge from banking operations into software systems.

[Repository](#)

Engineering fit

- Comfortable with technical material that needs structure: source files, reports, build scripts, documentation, and project state.
- Interested in systems where runtime behavior, user context, data, and documentation need to stay coherent.
- Brings operational experience from banking and insurance: pressure, procedures, customer impact, data quality, and regulated environments.
- Current strongest direction: ML/AI learning path, agentic workflow design, backend foundations, LaTeX/tooling, and public technical writing.

Education

Universitat Oberta de Catalunya	de	Software Engineering. Machine Learning and Artificial Intelligence specialization. Expected graduation: February 2027.
IronHack		Java Backend Development bootcamp. Capstone: IronBank microservices banking simulation.
Additional training	train-	Android/Kotlin app development at Fundació Francisco Puerto; FullStack React at Barcelona ITAcademy; Linux administration at PUE – Consorci per a la Formació Continua de Catalunya.

Role angles

ML / Data	ML/AI specialization, Python learning path, SQL, data quality, technical reporting, and regulated-domain context.
Agentic AI	Workflow structure, repository state, role files, project reports, and public project pages.
Backend / Tooling	Java, Spring Boot, REST APIs, SQL, Git, Linux, LaTeX tooling, CI-oriented documentation, and static delivery.
