Profile

Software Engineering student at Universitat Oberta de Catalunya, specializing in Machine Learning and Artificial Intelligence and graduating in February 2027. Building public, inspectable engineering artifacts around agentic systems, LaTeX tooling, and data/ML-oriented software. Fifteen years of banking and insurance operations before engineering: regulated processes, high-volume case resolution, team leadership, and stakeholder communication under pressure.

Target Roles

ML engineering, data engineering, agentic AI, platform/tooling, research engineering, regulated-domain software, and documentation-heavy engineering roles where systems thinking and investigation matter.

Selected Projects

AgenticCareerBoost	Path-based, model-agnostic multi-agent operating system for engineering career development. Uses 6 agent roles, 7 workflow contracts, formal truth hierarchy, LaTeX reports, GitHub Pages, and public evidence trails.
P3CTeX	Custom LaTeX document class and package ecosystem for academic document production. Demonstrates tooling depth, package architecture, documentation, and open-source discipline.
p3cTeX-UMLST	Standalone UML diagram and code listing packages extracted from P3CTeX. Shows modularization and package extraction from a larger LaTeX system.
IronBank	Java/Spring Boot microservices banking simulation from IronHack. Older capstone project, useful as backend evidence after README cleanup.

Technical Stack

Languages: Python, Java, Kotlin, SQL, LaTeX, JavaScript, Bash

Frameworks/tools: Spring Boot, Git, GitHub Actions, Maven, latexmk, Linux, REST APIs

Domains: Machine Learning, Artificial Intelligence, agentic systems, systems design, microservices, technical documentation, regulated-domain software

Education

Universitat Oberta de Catalunya	Software Engineering, Machine Learning and Artificial Intelligence specialization. Expected graduation: February 2027.
IronHack	Java Backend Development bootcamp. Capstone: IronBank microservices banking simulation.
Additional training	Android/Kotlin app development at Fundación Francisco Puerto, FullStack React at Barcelona ITAcademy and Linux administration at PUE-Consorci per a la Formació Continua de Catalunya.

Operations Background

- 15 years in customer-facing banking and insurance operations.
- Team leadership, case triage, regulated processes, stakeholder communication, and high-volume problem resolution.
- Engineering relevance: data quality, compliance awareness, failure-mode thinking, audit trails, and systems that survive operational pressure.
