3	Report Library	4
4	Documentation Gap Audit	5
5	Current Public Story	6
6	Non-Goals	7

Chapter 1

Purpose

Key takeaway: This report is the bridge between the public project page and the deeper evidence body. It tells the development history without hiding the failure modes that made the current architecture necessary.

AgenticCareerBoost is not only a static portfolio page. It is a repository-backed record of agentic development: rules, state, logs, reports, site routes, PDFs, validation scripts, and human-owned external tasks.

The website should make the project legible quickly. The LaTeX report set should carry the heavier proof: what was built, what failed, how the system recovered, and which evidence supports each claim. This document maps those two surfaces together so future social posts can reuse the same narrative without inventing a new story.

Chapter 2

Public Timeline

Key takeaway: The current public narrative has six stages. Each stage should point to evidence rather than asking the reader to trust a summary.

Table 2.1: AgenticCareerBoost development history.

#	Stage	Meaning	Primary evidence
1	Bootstrap Launch	First path-based agentic operating system: rules, roles, workflows, LaTeX infrastructure, CI, state, and launch options.	s000-agentic-os-bootstrap.pdf
2	Initial Growth	Positioning, profile audit, recruiter-readiness, CV artifacts, public cleanup, and early campaign material.	s001-profile-audit-positioning.pdf; s0015r-system-review.pdf; s002-restart-refresh.pdf
3	Context Poisoning	Stale drafts, duplicated paths, over-broad workflow ceremony, unclear state authority, and old style/copy material started steering later runs.	agentic-system-refactor-retrospec
4	End of Semester Pause	Useful artifacts existed, but the public narrative, social readiness, and evidence boundaries were not yet clean enough for a confident launch.	s003-website-os-clarity.pdf; s004-documentation-alignment.pdf
5	Failed Campaign Kickoff	Restart attempts exposed system poison: social/profile artifacts existed, but structure and authority drift made launch unsafe.	s002-restart-refresh.pdf; s0045-site-quality.pdf; refactor retrospective
6	Cleanup And Current Version	Rules/evidence separation, discarded draft policy, root/site simplification, report publication, direct-route validation, and current evidence reconciliation.	Refactor retrospective; evidence reconciliation; this map

Chapter 3

Report Library

Key takeaway: The published report set is the formal proof surface. The site exposes these PDFs; this report explains how they fit together.

Table 3.1: Published report roles.

Report	Role in the evidence story
agenticcareerboost-project-history.pdf	Historical bridge across all six timeline stages.
agentic-system-guide.pdf	Human-facing orientation manual for how to read the repository and its operating model.
s000-agentic-os-bootstrap.pdf	Deep technical case study for the original bootstrap architecture.
s001-profile-audit-positioning.pdf	Initial growth report: profile audit, market research, positioning, and first public-profile direction.
s0015r-system-review.pdf	Corrective system review for S-001.5 governance and missing documentation.
s002-restart-refresh.pdf	Restart refresh report: framework review, site foundation, LinkedIn reactivation, GitHub profile package, and repo-local closure.
s003-website-os-clarity.pdf	Website clarity report: public route map, project page translation, metadata/data surfaces, and browser validation.
s004-documentation-alignment.pdf	Documentation alignment report: career guardrail, re-launch calibration, human-owned gates, and strategy correction.
s0045-site-quality.pdf	Site-quality report: generated status, runtime metadata, dashboard rendering, responsive fixes, and browser/render gates.
agentic-system-refactor-retrospectives.pdf	Thorough refactor context poisoning, over-ceremony, state authority drift, and cleanup principles.
agentic-system-evidence-reconciliation.pdf	Conciliatory reconciliation: drift fixes, intentional discarded draft deletion, route validation, and proof alignment.

Chapter 4

Documentation Gap Audit

Key takeaway: The intermediate log-backed stages have now been backfilled with formal PDFs. The backfills document existing evidence; they do not reopen old sprints, restore discarded drafts, or create new authority.

Table 4.1: Documentation coverage by stage.

Stage	Coverage	Decision
Bootstrap Launch	Full formal PDF plus logs.	Covered by <code>s000-agentic-os-bootstrap.pdf</code> .
Initial Growth	S-001 formal PDF, S-001.5R corrective PDF, and S-002R restart report.	Covered; S-001.5 remains documented through review/remediation.
Context Poisoning	Formal refactor retrospective plus evidence reconciliation.	Covered; use this term consistently and keep discarded draft bodies deleted.
End of Semester Pause	S-003 website clarity and S-004 documentation alignment reports plus state logs.	Covered by backfilled PDFs and logs.
Failed Campaign Kickoff	S-002R restart report, S-004.5 site quality report, social/profile reviews, and refactor retrospective.	Covered without restoring discarded candidate outputs.
Cleanup And Current Version	Refactor, structure simplification, alignment/evidence-safety, reconciliation logs, and published PDFs.	Covered; keep future reports indexed when added.

The important distinction is authority. The new PDFs for S-002R, S-003, S-004, and S-004.5 are backfilled evidence reports. They summarize logs, closure notes, browser validation, implementation records, and human-gate decisions that already existed. They do not rewrite the original closures and they do not make discarded social/profile draft bodies active context again.

Chapter 5

Current Public Story

Key takeaway: The site should explain the project as a traceable engineering artifact. Social posts should distribute that evidence, not replace it.

The current story is simple enough to reuse across the website and later social posts:

AgenticCareerBoost began as a path-based agentic workflow and grew into a public proof repository. It then hit the same failure mode many agentic systems hit: too much stale context, too many active meanings, and not enough authority separation. The current version is valuable because it records the cleanup as part of the work: rules define behavior, state records evidence, reports explain the arc, and the site exposes the proof.

That is why the project page should expose all formal reports and not only the current dashboard. The dashboard tells the present state. The report library shows the development history.

Chapter 6

Non-Goals

This run does not create social posts, reopen S-005, restore discarded draft bodies, or create a new site architecture. Its job is alignment: public page, report inventory, and evidence history must describe the same project.
